

Juniper Salon

Filling cancelled appointments

The work today

Lena and Carla check Square, consult a spreadsheet and text clients by hand.

The failure to prevent

A group text left two clients expecting the same appointment.

The goal: fill more openings with less time spent chasing replies.

Local prototype with fictional clients

One client gets the offer at a time

1. Match the opening

Service, duration, stylist and availability determine eligibility. Start with the earliest eligible waitlist entry.

2. Give one exclusive offer

The client gets up to 15 minutes, ending sooner if the appointment starts. Decline or timeout moves to the next client.

3. Hold, then confirm

Acceptance holds the slot. Staff update Square and mark it confirmed here. Later appointments still need manual rescheduling.

Offer history and client-reply simulator

The process survives a closed page

Temporal keeps the salon process running.
Individual openings finish inside it.

The original deadline stays

Closing or reloading the page does not give a client extra time.

Old replies cannot take the slot

Expired or cancelled offers cannot replace the current booking.

Recovery was checked

After a worker restart, the overdue offer expired and the next client received an offer.

10 automated checks passed

Staff control and prototype boundaries

When staff need to act

Delivery failure pauses the search for retry, skip or stop.

Questions flag staff attention without extending the deadline.

STOP excludes a client from future offers.

A phone booking or cancellation invalidates the outstanding offer.

What remains outside this demo

All clients and text messages are simulated, including delivery failures.

Square updates and rescheduling remain manual.

The demo handles same-day openings on one local laptop.

Real SMS, authentication and calendar integration still need implementation.

Next: a walkthrough with Lena and Carla

First, rehearse the exceptions

Use fictional clients to try a timeout, failed delivery, phone booking and Square confirmation. Confirm that both staff members know what to do next.

Before any real client trial

Agree on concurrency and timezone rules. Add sign-in, SMS consent and delivery handling, with monitoring and a staff fallback.

What a later pilot should measure

Same-day openings filled

Staff time chasing replies

Competing booking incidents

Record a baseline first.
The prototype has not yet demonstrated a business improvement.
